

PAVEMENT MARKING ENHANCEMENTS

■ **Currently** – Drivers can become confused about which lane to use at the base of the bridge

■ **Proposed** – A pavement marking plan designed to reduce this confusion. The plan features standard lines, skip lines and pavement marking legends (e.g. I-676 WEST) around the curve at the base of the bridge. These markings will give drivers more positive guidance.

COST: Up to \$10,000

■ To be installed with DRPA’s pavement marking maintenance program (spring 2009)
